

Divyansh Rana

divyansh.rana12@gmail.com | [Linkedln](#) | +91 8968121890 | Bengaluru, India | [Portfolio](#)

Technical Skills

Backend/Frameworks: Java • Spring Boot • Quarkus • Spring MVC • Hibernate Application Servers • Servlet Containers • JPA

Data Messaging,Testing Stack: Kafka • Unit Testing • JUnit

Databases: PostgreSQL • MySQL • MongoDB • DynamoDB • Neo4j • Redis

Cloud/DevOps: AWS (ECS, S3, Lambda, CloudWatch) • Kubernetes • Docker • GitLab CI/CD • Terraform • Helm • Grafana

Frontend: Angular • Typescript • Javascript

Experience | 7+ years | Backend Engineering • Distributed Systems • Cloud • Agentic Workflow

JP Morgan Chase & Co. – *Software Engineer III | AVP*

Nov 2025 – Present | Bangalore, India

- Designed and implemented reconciliation mechanisms to support backward compatibility during service evolution and schema changes, ensuring zero data loss and seamless production upgrades.
- Working on Event-driven microservices-based data asset, metadata management platform. Dependency-driven workflow for client data ingestion and enrichment to Databricks using input/output registrations and rule-based dependency resolution, orchestrated via Saga pattern across data pipelines.
- Led GraalVM native build POC and implementation strategy, evaluating performance trade-offs to optimize startup latency and runtime resource consumption.
- Working on databricks pipelines performing client actions on the rules set - Reading/writing/partitioning
- Led a high-risk framework migration with controlled rollout.
- Built an AI-native autonomous software engineering agent using LLMs and Model Context Protocol (MCP) to orchestrate end-to-end development, CI/CD, deployment, and validation workflows across Bitbucket, Jira, Confluence, Jenkins, Spinnaker, AWS, observability dashboards, and application logs.
- JAVA, AWS, Jenkins, ECS, Cloudwatch, IAMs, Redis, Springboot, PostgreSQL, Docker, Databricks

Delta Airlines – *Software Engineer II*

Dec 2022 – Nov 2025 | Bangalore, India

- Architected and developed a Cloud-native Vacation Booking platform in **Java, Quarkus**, supporting **30K+ concurrent users**,the release increased **SME agent active user base by ~40%**, making it one of the most **impactful deliverables of the year**.
- Led a **cost-optimization** initiative in the **ROSA (Red Hat OpenShift Service on AWS)** environment by identifying static pod deployments and enabling **autoscaling**, improving resource utilization for 20K–30K users and achieving an estimated annual cost **saving of \$30,000–\$40,000**.
- Implemented **SAGA**-based distributed transactions with **Kafka Stream** for fault-tolerant booking flows.
- Developed a **real-time** user activity detection service from scratch, monitoring **cross-tab interactions**, **syncing session states**, and triggering configurable alerts (e.g., logout warnings), enhancing engagement and security.
- Owned the **Microservices** roadmap for the **Spring** based **Delta Airline-booking platform** handling \$4.8–9.6 million USD in weekly bookings while maintaining 99.9% availability on **AWS EKS**.
- Modernised 11 legacy mainframe applications to Nx micro-frontends and **Quarkus containers** cutting deployment cycles from 1-2 weeks to under 4 hours (**80-90% faster**) across an 8-member team.
- Led caching and integration strategy using **Redis** and **PostgresSQL** that reduced **vacation-search latency by 93% (30 s → 2 s) for 5,000-10,000 daily searches**.
- Coached four junior engineers on design reviews and **CI/CD** hygiene, boosting **deployment success rate to 99%+**.
- Instrumented services with **CloudWatch**, Grafana and automated alarms, reducing mean-time-to-detect by 40%.
- JAVA, AWS, EC2, S3, Route53, EventBridge, Cloudwatch, DynamoDB, IAMs, Redis, Quarkus, Springboot, Angular, NX, MongoDB, PostgreSQL, Docker

Scienaptic AI – *Software Engineer II*

Oct 2020 – Dec 2022 | Bangalore, India

- Delivered an **automated credit-decisioning platform** used by 150+ banks/NBFCs, processing 3 million decisions and ~\$2.84 billion USD in loan applications per month, increasing 1-hour decision share from **35% to 62%**.
- Integrated bureau and alternative-data **asynchronous APIs**, improving credit-risk prediction accuracy by 15% through smarter data aggregation and **real-time ingestion pipelines**.
- Built a **pricing-guidance API** for a global hardware client, enabling ~5% sales uplift via dynamic competitor benchmarking and personalized price recommendations.
- Developed a real-time forecasting dashboard for a major **Banking** Client using **Java (Spring Boot), MySQL, Kafka Streaming, Spark Streaming**, and **Angular**, reducing report generation time from hours to minutes, showcasing backend-focused full-stack development.
- Introduced PR templates, **test-driven development (TDD)**, and **design-pattern guidelines** for a 12-member engineering squad, raising code coverage to 80% and reducing post-release defects by 30%
- JAVA, Springboot, Kafka, Junit, AWS Lamda, AWS pipeline, NodeJS, PySpark, MongoDB, Javascript, AngularJS, AurliaJS

Infosys – *Systems Engineer*

Aug 2019 – Oct 2020 | Pune, India

- Developed an internal job portal (**React/Spring**) serving 2,000+ employees and shortening HR coordination cycles.
- Revamped intranet homepage used by 10,000 staff, increasing daily **engagement by 25%**.
- Consistently met **100% of sprint commitments under XP and continuous-integration practices**.

Education

B.E. in Computer Science Engineering | 2015 – 2019 | India

CGPA: 8.2 / 10

Relevant Core Skills: Microservices Architecture, **OOPS** (Object Oriented Programming), **Data Structures & Algorithms**, Cloud-Native Development, Event-Driven Design, **DevOps CI/CD**, **Agile-Scrum Methodology**, Technical Leadership Mentoring, Technical Documentation **Software Design**,Performance Optimisation

Projects

- GenAI Reddit Uploader**
 - Automated bot using **Stable Diffusion XL for image generation** with dynamic text, filters, and anti-patterns. • Integrated GitHub Actions worker pipelines to schedule daily posts on a subreddit. • Enables end-to-end automated content generation and publishing
- Photogram (Social Media App)**
 - Developed a Dynamic WEB Application using **JAVA ,Spring MVC, Spring Boot ,Rest API** and **JWT-based** authentication. • Implented data Integrity measures by utilizing **ORM** Framework like **Hibernate** and **Spring Security**. • Validated code robustness by employing **JUnit** and **Mockito** for thorough testing coverage
- GraphLink (Scalable Backend Infra)**
 - Built an event-driven microservices playground on **Kubernetes integrating Neo4J, Redis, PostgreSQL and Kafka**. • Implemented **MVC** architecture for structured code organisation ,separating data handling(**Model**),user interface(**View**), and business logic (**Controller**),optimising maintainability and scalability.

Achievements & Honors:

- Top MVP Learner, Delta Air Lines (156 Udemy Business hours)**, Q1-Q2 2025.
- Promotion: Software Developer I → II**, Delta Air Lines (Mar 2024)
- Promotion: Software Engineer I → II**, Scienaptic AI (Oct 2022)
- AI Foundations Nanodegree** – Udacity | Issued May 2018
